

IN THE SPECIFICATION

Please amend the Originally-Filed Specification as follows:

(a) In par. [0024], beginning on page 4 and bridging into page 5, please amend as follows:

- - [0024] When body 1 is further suspended and lowered, body 1 is drawn due to the gravitational force of weight 6 of guide 3 which has already entered the interior of jet pump 10, as body 1 follows guide 3. Bellows 8, which covers joint 7, may have a function to restore guide 3 to a original position, since bellows 8 is made of an elastic member. Thus, guide 3 is biased to return to an appropriate position with respect to body 1. In this manner, body 1 is inserted into the interior of jet pump 10 substantially, without varying the posture or the angle of operation apparatus 100 as a whole. - -
